Research & Development

• SMC has conducted extensive testing and design modifications to achieve current bin design.

• Wax / Curtain Coated product, while useful indoors and outdoors, could not be recycled and had to be land filled.

• New coatings have been developed, tested, and refined to allow for durability and recyclability.
Research & Development (cont’d.)

• New coatings can withstand harsh weather conditions.
• Empirical tests (30 day outdoor trials) have proven successful.
• New coated linerboard showed excellent results with 6 inches of rain and extreme ultraviolet exposure.
• Extensive print trials have been performed.
Research & Development (cont’d.)

• New ink technology has been employed to allow for ultraviolet resistance and water and weather resistance.

• R&D included meetings with local, state, and national agencies to fine tune product development to meet recycling initiatives.

• All R&D efforts with suppliers have provided a “proprietary process” for the recycle bins.
Product Capabilities (cont’d.)

- Products have a 100% post-consumer recycled content and are 100% recyclable.
- Cost effective versus bulky plastic containers.
- Print can be customized for any occasion.
- Recycle Station bins are weather resistant and are not made to withstand prolonged exposure / standing water.
